Summary

Software Engineering student at UTS with a strong interest in Artificial Intelligence, digital communication and emerging technologies. Currently conducting research on the impact of generative AI in software engineering. Experienced in both technical development and user-focused systems, with the ability to contribute to content creation, technical communication and AI-driven solutions. Seeking to apply both creative and technical skills in an AI-focused internship.

Education**Bachelor of Engineering (Honours) – Software Engineering**

University of Technology Sydney (UTS)

Expected Graduation: 2027

- WAM: 75.53 (Distinction)
- GPA: 5.60

Relevant Coursework:

- Data Structures & Algorithms
- Software Development Studio
- Systems Testing & Quality Management
- Software Analysis Studio
- Business Requirements Modelling

Research Experience

Undergraduate Research: AI in Software Engineering

- Investigating how generative AI tools impact student productivity and programming performance
- Applying a multi-dimensional evaluation framework (accuracy, efficiency, code quality)
- Analysing both technical outcomes and used perceptions through structured research methods
- Developing strong understanding of AI applications, limitations and ethical considerations

Technical Skills

Languages: C, Java, Python, SQL

Tools & Technologies: Git, VS Code, Linux, Z3 Solver (basic), Tailwind CSS

AI & Concepts:

- Artificial intelligence fundamentals
- Data structure & Algorithms
- Static Program Analysis (LLVM/SVF exposure)
- Software Testing and QA
- Object-Oriented Programming

Projects

Software Analysis & Static Analysis Tools

- Developed program analysis solutions using LLVM-based frameworks
- Implemented control flow and data flow analysis concepts
- Debugged complex pointer and graph-based representations (ICFG, PAG)
- Applied problem-solving to fix real test-case failures and API mismatches

Full-Stack Integration Platform (Connectify UI)

- Designed and developed responsive web interfaces using Tailwind CSS
- Built dashboards with real-time metrics (flows, transactions, errors)
- Implemented UI components including modals, dropdowns, and notifications
- Focused on usability, performance, and clean UI/UX design

JavaFX MVC Application

- Developed a multi-screen application using JavaFX and MVC architecture
- Implemented controllers, models, and dynamic UI updates
- Handled validation, user input, and error handling
- Improved modularity and maintainability of codebase

Leadership & Activities

- Member, UTS Engineering Society
- Member, UTS Programming Society
- Player, Galungara Cricket Club

Work Experience

Production Worker – Yummy Karma Foods

- Worked collaboratively in a fast-paced team environment
- Maintained quality standards and efficiency under time constraints
- Developed strong communication and teamwork skills

Key Strengths

- Strong analytical and problem-solving ability
- Effective team collaboration and communication
- Ability to quickly learn new technologies and tools
- Passion for software engineering and real-world applications

Additional Information

- Eligible for full-time internship (May – August 2026)
- Completed Professional Practice Preparation 1
- Australian work rights
